

PEFC Policy

Sustainable forest management and thoughtful use of wood are at the core of ZAZA TIMBER's business. We care not only about the origin of the wood but also about sustainable forest management. The PEFC forest certification system confirms that PEFC-certified products are made from responsibly sourced wood, originating from well-managed forests. Everyone has the opportunity to make a responsible choice by opting for PEFC-certified products.

PEFC (Programme for the Endorsement of Forest Certification) was established in 1999, bringing together European forest owners and other stakeholders with the goal of creating a certification system that promotes sustainable and responsible forest management. Today, PEFC is the largest forest certification system in the world in terms of certified forest area. The aim of PEFC is to ensure that we all can benefit from the diverse resources provided by forests while ensuring that these forests are preserved for future generations. A PEFC-certified product guarantees that the raw material used in its production comes from a forest managed sustainably, considering environmental, social, and economic interests.

The forest is a renewable natural resource that plays a crucial role in maintaining global environmental values, as well as social and economic functions. Sustainably and responsibly managed forests not only mitigate climate change and reduce the risk of natural disasters but also represent one of the most biologically diverse ecosystems on Earth. Forest ecosystems also provide many other ecosystem services, including recreation, non-timber forest products, and other valuable resources.

ZAZA TIMBER specializes in the production, design, and construction of glued timber structures. We pay special attention to the origin and sustainability of the wood we use. We are committed to adhering to PEFC standards to ensure responsible and sustainable use of wood in our products.

Key Commitments:

- We use PEFC-certified wood that comes from responsibly managed forests, ensuring full traceability from raw material to the finished product.
- We work with suppliers who meet PEFC requirements and carefully evaluate the origin of the wood.
- We optimize production processes to maximize the use of wood resources and minimize waste.
- We ensure that environmentally friendly technologies and materials are used in the production process.
- We protect employee rights and promote local employment.
- We ensure that all employees are informed about PEFC requirements and our commitment to using sustainable materials.
- We promote customer awareness of the benefits of PEFC-certified products and offer solutions that encourage sustainable construction.
- We regularly review and improve our production processes and traceability systems to ensure compliance with PEFC standards and environmental protection goals.

ZAZA TIMBER Production SIA PEFC Chain of Custody Certificate: SGSCH-PEFC-COC-120006
